

ϕ (fill ratio $\text{nnz}(L)/\text{nnz}(A)$)

10^1

10^0

- best: sparse
- best: semisparse
- best: dense
- bordered ($\sigma \geq 20$)

- dense gate $\rho = 0.9$
- $\phi = 2, \rho = 0.15$
- small = cheap matrix
- large = expensive
